5. New conclusions of dissertation

- The dissertation systematized and clarified basic reasoning of construction sector, significance of construction sector in the economy, main construction subsectors, features of construction sector and construction enterprises. Especially, the dissertation presented clarifying definition, evaluation criteria and determinants of operational efficiency; role of finance in improving enterprises' operational efficiency, some financial solutions for improving enterprises' operational efficiency. At the same time, reviewing international and domestic experience on financial solutions for improving enterprises' operational efficiency. Since then, followed by lessons for Vietnam construction enterprises.

- The thesis has analyzed quite deeply and comprehensively the status of Songda Corporation and construction sector's business result during 2011-2014. Main construction companies mostly remained high debt ratios, limited equity, low or medium profitability ratio due to both objective and subjective reasons. Construction companies actively applied financial solutions to improve their operational efficiency, however, current achievements were still under expectation due to both internal and external factors. This mean these construction companies are required to implement stronger financial solutions to recover their financial picture and optimize operational efficiency.

- The dissertation has proposed system of Financial solutions for improving operational efficiency of construction companies in Song Da Corporation:

- (1) Strategy restructuring programme;
- (2) Financial restructuring to improve financial capacity;
- (3) Developing and implementing effectively long term financial policies and strategies;
- (4) Improving project assessment and implementation
- (5) Solutions for improving capital turnover.

Also the thesis given the conditions to be able to deploy, implement solutions.
